(54) Title: ELECTROWETTING MODULE

(57) Abstract: An electrowetting module (20) comprises a  
fluid chamber (8) which contains a first fluid (A) and a sec-  
ond fluid (B), which are separated by an interface (14), and  
means to (16,17) exert a force on at least one of the fluids to  
change the position and/or shape of the interface. By pro-  
viding at least one of the fluids with a compound having at  
least one aromatic, non-fused, residue, the performance of  
the module can be enhanced. For example the optical power  
of an electrowetting lens (30) can be increased.
